PROJECT OVER VIEW AND SCENAIRO:

I have analyzed all the tasks and work on it with my best efforts full report gives you the idea of each task I have done and uploaded the screenshots of the tasks where it is required and will easy to understand

The scenario :

I have just been selected as a Student Digital Ambassador of my college. Here my role is to help peers navigate the digital world — from creating professional online profiles, to communicating safely and responsibly online. My first assignment is to build a Digital Literacy Portfolio that you will present to the faculty committee and share with my batch.

TASK-1 CREATE A DIGITAL LITERACY INFOGRAPHIC .

Canva is a popular, user-friendly online graphic design and publishing platform launched in 2013, designed to empower everyone to create visual content. It features a vast library of templates, AI-powered tools, and photo/video editing, suitable for social media, presentations, and websites, with over 220M+ monthly users. **Key Aspects of Canva:**

- **Design Tool:** Enables users to create social media graphics, presentations, posters, videos, and websites, even without professional design experience.
- **Key Features:**

  Offers a drag-and-drop interface, thousands of templates, AI image generation, background removal, and a large stock media library.
- **Accessibility:** Available as a web browser tool and app, with both free and paid (Canva Pro) subscriptions.
- **Workflow Integration:** Enables professional brand management (colors, logos, fonts) and provides tools for collaborative teamwork.
- **Usage:** Used for personal projects, professional marketing, and commercial content creation.

Digital Literacy

Digital literacy is the ability to navigate, evaluate, and create information using technology responsibly and effectively. It goes beyond basic computer skills, encompassing critical thinking to assess online credibility and ethical awareness. Essential tools include search engines, web browsers, and collaborative platforms like Google Workspace or Microsoft 365

Safe Internet

Safe internet practices are crucial to protect personal information, requiring the use of strong, unique passwords, password managers, and two-factor authentication to avoid phishing scams and malware. A positive online presence is a "digital footprint" that acts as a public portfolio; it should be curated consistently across platforms like LinkedIn to reflect professionalism. Finally, email etiquette ensures clear, professional, and respectful communication, which involves using clear subject lines, proper greetings, and avoiding all caps, which is perceived as shouting.

TASK2- MY STUDENT DIGITAL PORTFOLIO.

I am Somya Goyal, a student of Computer Science Engineering (Cyber Security and Digital Forensics) at VIT Bhopal University, from the 2025 batch. I have a strong interest in improving my problem-solving skills through Data Structures and Algorithms (DSA). Along with this, I am currently learning web development and exploring machine learning concepts to build a solid foundation in both fields.

As part of my digital portfolio, I created profiles on GitHub, LinkedIn, and Kaggle. On GitHub, I have set up my profile with a README that introduces me and highlights my interests. It serves as a platform where I can upload my coding projects, practice DSA, and track my progress over time. I believe it will help me showcase my skills and growth in a structured way.

On LinkedIn, I created a professional profile where I have added my academic details and basic information. It helps me connect with other students, seniors, and professionals, and also allows me to stay updated with opportunities and industry trends. On Kaggle, I created an account to explore data science and machine learning. Although I am just starting, I plan to use it to work with datasets, learn from notebooks, and gradually participate in competitions.

In the coming years, I aim to regularly update my GitHub with meaningful projects, including DSA practice, web development applications, and beginner-level machine learning projects, so that I can clearly track my growth and showcase my work. On LinkedIn, I plan to actively share my learning journey, achievements, certifications, and project updates to build a strong professional presence and connect with like-minded individuals and industry professionals. On Kaggle, I want to consistently practice using real-world datasets, explore different approaches, and gradually participate in competitions to improve my problem-solving and analytical skills. By using these platforms regularly and effectively, I hope to build a strong technical profile, gain practical experience, and prepare myself for

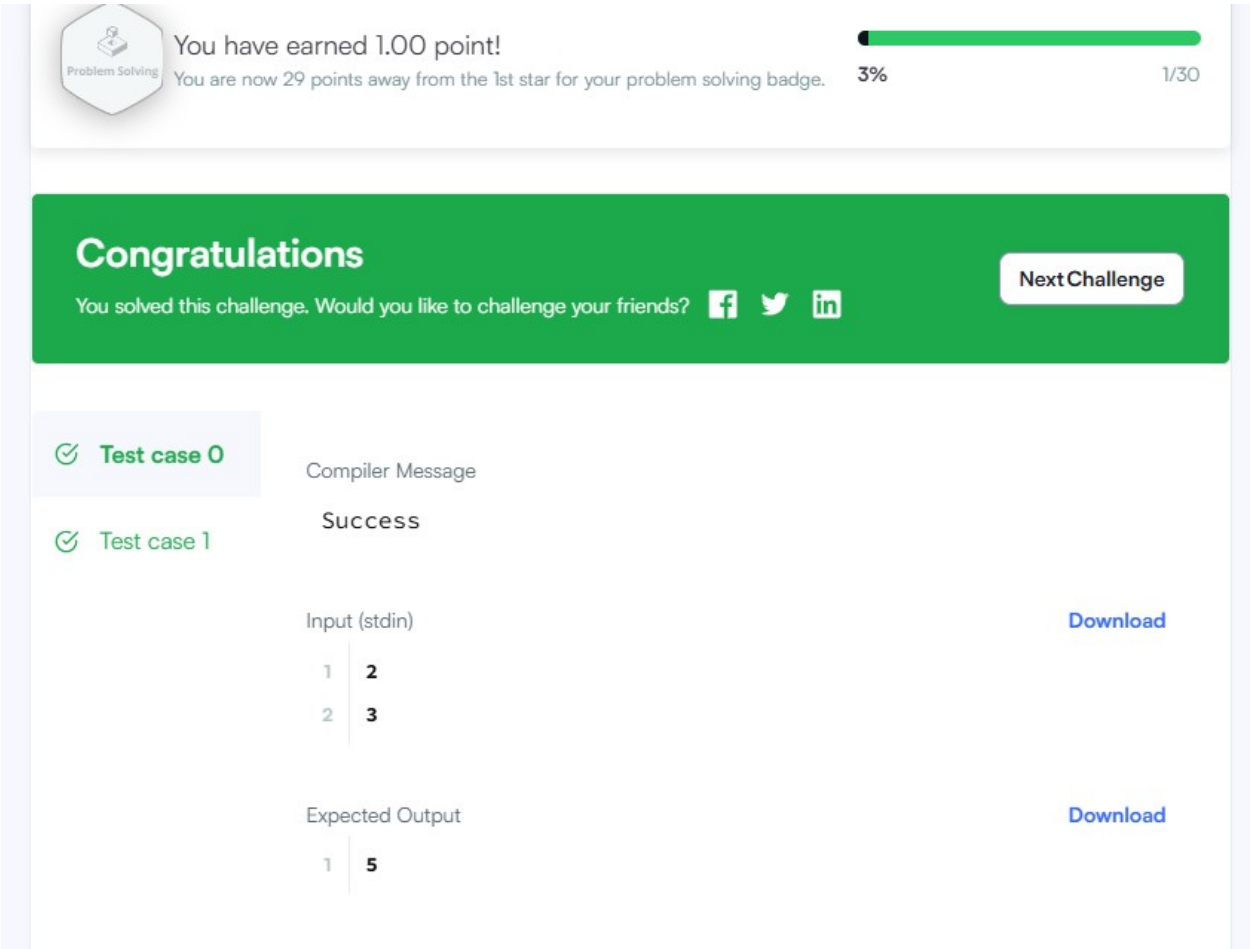
TASK-3 Coding and collaboration platforms .

Part A – Coding Practice on HackerRank

This website help to check my knowledge for the programming languages and with the score board it make me to maintain the score board consistently by doing the challenges and help me academically for the subjects related to programming and also help in interviews and higher level exams



Part B – Google Workspace Collaboration

For this task, I used **Google Forms** within the Google Workspace suite to create a digital literacy awareness quiz for my batchmates. The platform was chosen for its accessibility, free-to-use nature, and robust, automatic data analysis tools, which are ideal for peer evaluation.

I built a five-question interactive quiz focused on crucial aspects of digital citizenship, including phishing detection, strong password practices, and online security management. The quiz featured multiple-choice questions to test specific knowledge and a short-answer question to assess the understanding of key terms like "phishing."

These tools will help me academically by allowing me to quickly gather data from peers for research projects, create self-correcting quizzes for group study sessions, and analyze survey data using built-in pie charts and summary reports. Mastering Google Forms ensures I can collect, organize, and analyze information efficiently, which is essential for collaborative assignments and academic research in the digital age. This experience directly enhances my practical skills in digital data collection and evaluation.

TASK-4 Draft a Professional Email & Etiquette Guide

Part A: Two professional emails

Paragraph Styles

Email 1:To professor requesting an extension on an assignment submission deadline

To:

prof.naresh @vitbhoapl.ac.in

Subject:

Request for Extension — Discrete problems Assignment

Dear Professor Naresh,

I hope you're doing well. I'm writing regarding the Discrete problems assignment due this Friday, 28th March.

Over the past week I came down with a fever and wasn't able to attend classes and work on the assignment as I have planned. I've been trying to catch up since, but I don't think I'll be able to submit the work .

Paragraph Styles

Would it be possible to have a short extension —even just a few extra days to complete it properly? I completely understand that it's not feasible given the course schedule, and I'll make sure to submit by Friday regardless.

I've attached a medical report for your reference. Thank you for considering this, and I apologise for any inconvenience caused.

Warm regards,

Somya Goyal

Subject:

Application — Summer Internship 2026 (Software Development)

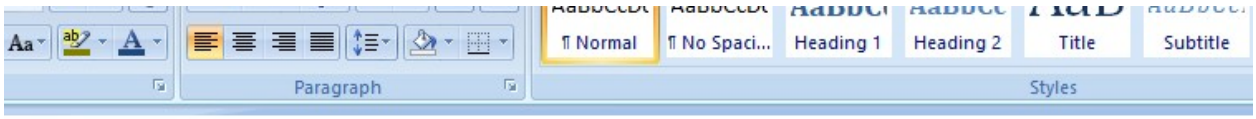
Dear Ms.Jenica,

Paragraph Styles

I came across CogniTech's summer internship listing on LinkedIn last week and I wanted to reach out to you directly. The work your team is doing in Data Analysis with feedback loops genuinely caught my attention.

I'm currently in my first year doing B.Tech. Computer Science at VIT Bhopal University. I know that might give some people pause, but I've been keeping myself busy beyond the classroom — over the past month I've been working on a few personal projects including a NLP The Sentiment Analysis Loop for customers , Churn Prediction using Database Logs for sales/ finance and I

recently completed a short course on Sentiment Analysis with Python. I'm comfortable with Git, version control workflows.



I'm a quick learner and wanted to work on something real, not just assignments .I'll put in twice the effort to prove I am. I'd love the chance to contribute during the summer and learn from your team hands-on. I've attached my resume and I'm happy to share project links if that helps.

Thank you for your time — I look forward to hearing from you.

Best regards,

Somya Goyal

Part B: Social Media Do's and Don'ts checklist

Social Media Do's and Dont's check list - Notepad

File Edit Format View Help

Social Media Do's and Dont's check list

-Do's

*Do check privacy settings :Ensure only friends and family can see personal posts and enable two factor authentication.

*Do think before you post:Remember that "one on the internet ,always on the internet".

*Do be respectful:Use the same courtesy and respect as in real life ,and consider using emojis to convey tone.

*Do use strong unique password:Avoid using the same password across multiple accounts.

*Do fact-check:Verify information before sharing to avoid contributing to misinformation.

-Dont's

*Don't steal content:Always ask permission and give credit when sharing photos or information from others .

*Don't over post or spam:Flooding feeds causes followers to unfollow or mute your content.

*Don't overshare:Avoid posting specific locations ,travel plans,or personal details like home address or phone number.

*Don't feed trolls/bullies :Never engage with negative comments, report bullying instead.

*Don't post when emotional:Avoid posting when angry or tired,as you cannot take it back.

*Don't use work/business site for personal venting:keep personal polictics and intense feelings separate from professional accounts.

In a professional setting, poor digital communication can have severe consequences, as seen in a common scenario where a critical software update is delayed due to ambiguous email instructions. A project manager might send a vaguely worded email about "minor" changes to a client's requirements, which the development team interprets as low priority. Consequently, the team continues working on the original design, leading to significant wasted effort, budget overruns, and missed deadlines when the true scope is finally clarified.

To prevent such issues, the team could have used more precise digital tools. Instead of relying solely on email, they could have held a brief video meeting to confirm the new specifications or used project management software to document and track changes in real-time. Implementing a standard feedback loop, where recipients summarize their understanding of digital instructions, ensures all parties are aligned from the start.

TASK-5 Cybercrime Awareness Case Study & Prevention Guide

Part A:Case Study

Task-5 Part A:

Case Study : PHISHING

Phishing is a depictive cybercrime where attackers pose a legitimate entities such as banks ,government agencies or popular online services to trick individuals into revealing sensitive information like usernames ,passwords and financial details.

How It Happens (Step-by-Step)

1. Lure initiation : The attackers sends a fraudulent email or SMS that appears to be from a trusted source such as security alert from major bank.
2. Social Engineering: The message creates a sense of urgency ,claiming the victims account will be suspended unless they "verify" their details immediately.
3. The Hook: The victim clicks a provide link ,which redirects them to a spoofed website that looks identical to the official one .
4. Data Harvesting: The victim enters their login credentials or credit card numbers on the fake website ,which attacker captures in real time .
5. Exploitation: The attacker uses the stolen the data to drain bank accounts ,make unauthorized purchases ,or sell the information on the dark web.

Target Audience

While anyone with an internet connection is a potential target, attackers often

,make unauthorized purchases ,or sell the information on the dark web.

Target Audience

While anyone with an internet connection is a potential target, attackers often focus on elderly individuals less familiar with tech security and employees of large organizations to gain corporate network access.

Consequences

Victims face sever e financial loss, damage credit scores ,and long term stress of identity theft .For business ,a single successful phishing link can lead to massive data breaches and irreparable reputational damage .

Part B: Prevention Checklist

Prevention Checklist - Notepad

File Edit Format View Help

```
Prevention Checklist:

-Stay safe Online check list for indian students:

*Enable 2-Factor Authentication(2FA) Everywhere.
*Use Strong and Unique Passwords.
*Beware of "Too-Good-To-Be-True" offers.
*Verify before you click (Phishing Protection).
*Secure your phone screen lock.
*Avoid public Wi-Fi for sensetive tasks.
*UPI Safety: Never Enter PIN TO receive money remember, you never need to enter your PIN to receive money
*UPI Safety: Check beneficiary name before paying.

EMERGENCY: THNGS WHAT TO DO IF SCAMMED
act within the first hour ("Golden Hour") to increase the reversing the transaction .

-Helpline: Call 1930 (National Cyber Crime Helpline)24X7 to report finincial fraud and freeze the money.

-Portal: Register a formal complaint on cybercrime.gov.in.

-Evidence: Take screenshots of the payment ,message, phonenumber or UPI id of scammer .
```

Thing that surprised me is that there are so many scam done day by day which is on high rate mainly the people who have not much knowledge about online banking apps become the prey of the scammers which includes senior citizens and collage and school going students

Preventions mention in the file actually help us out to be safe online

And personally I will change my habit that is applying 2-factor authentication as I am not taking it serous but it make the things and account details safe from misusing against any person in doing cyber crime.

SUMMARY

Each module depicts a meaning this project not for jus completion it also make us digitally literate which includes:

-communicating online by creating online profiles in linkedin, git hub, kaggle etc .

-awareness and responsibility from the case study task .

-practical digital skills from the collaboration with google workspace by creating quiz on google forms.

-creativity and innovation by using online websites for creating infographic by canva, miro etc.

-integration and application by creating and maintaining project file in repository .

-professionalism and digital presence by maintaining accounts on platforms like github ,linkedin etc.

-staying safe and ethical in digital spaces by checklist on cyber awareness, email writing etiquette, do's and don’ts on social media check list is helpful.

overall this project helps with the foundational toolkit for thriving in academic, professional and personal digital environment.
